JANUS et Cie's Mood Dining and Lounge

Collection has a relaxed, natural elegance that feels warm and welcoming. Mood chairs and sofas have seats and legs fashioned of solid teak and curved backs made of electrostatic powder-coated aluminum. Weather-resistant polyolefin fabric in dark grey is woven across the aluminum frame to create a resilient and supportive sling that is comfortable even without the padding of cushions.

Beaufurn's new Terza Collection of refined

lounge seating combines comfort and durability. Built for high-traffic areas, the well-proportioned size of these pieces makes them ideal for a range of locations including reception areas, malls and university libraries. Terza features a brushed steel frame and legs, and can be upholstered in a wide range of fabrics, including COL and COM.

The RBT task chair from **Teknion** represents a step forward in seated support for people of many heights and weights. Responsive back technology, found in the chair's unique system of ribs and linkages, allows it to comfortably, automatically and harmoniously respond and conform to the back shape and size of the user. RBT is GREENGUARD certified, contributes to LEED credits and is compliant with BIFMA e3 level 2.

The Pylon Chair from **Schellmann Furniture** captures the attention of users with its radical aesthetic and technical simplicity. The chair's molded shell can be specified in varnished beech or various gel-coated glass fiber composites; its cast aluminum supports are offered in a varnished finish.
